What's New in the?

USB Safely Remove is an easy to use USB device removal program that is available for Windows XP, Vista, 7, 8 and 10. The interface is simple and clean with no unnecessary features or options and uses a simplistic philosophy. However, that isn't to say it doesn't offer the users the necessary features that they need such as stopping device drivers from loading at boot, preventing auto starting, unloading of device drivers if removed, clearing previously used automounter configurations, completely stopping external devices from enumerating, and even ejecting if connected devices. It should be noted that none of these functions are required but are a simple way of allowing user

to completely manage their USB devices but they are optional not required. A small caveat; while USB Safely Remove might look harmless, the program is in fact not. Once USB Safely Remove is installed, it will remain in your system's startup list. While this is not a huge deal if you have a couple of USB devices, it could pose a problem for others. If you want to remove USB Safely Remove from your system, you'll have to go into the registry and remove it manually. Because USB Safely Remove is updated on a regular basis, it isn't recommended to simply go to device manager and remove USB Safely Remove. Users are recommended to use any registry cleaner that can help resolve the issue. You might be able to prevent the program from being loaded by your system's startup applications by updating the service section of the registry, or just deleting the entire key (USB Safely Remove).

Pros: -Updates on a regular basis -Simple and clean interface -Hotkeys functionality for quick device removal -Live preview and include in version -Uninstalls cleanly -No fancy options and features (just the ones you require) -Comprehensive USB device list -Comprehensive list of options (which are a bit detailed) -Saves your preferences/configurations -Disable USB Safely Remove in device manager

Cons: -Registry entries remain in registry -Live previews are not at all intuitive -Skin appears to be too polished for a free application (user interface) -Live previews are not 100% in sync to the device (on screen representation) -No one-click Eject -Available for both 32 bit and 64 bit systems
