You can download a digital version of this book at [www.wiley.com/go/photoshopden](http://www.wiley.com/go/photoshopden). The following sections highlight Photoshop's features. The Timeline You can't work with Photoshop without using the Timeline. It can be dragged up or down to adjust the space between frames in a sequence. It shows the frame you're currently working on and shows you all the frames in a sequence that were previously started or completed before you started your current frame. The Edit List It enables you to edit several images simultaneously. This can be quite useful when you want to make adjustments to more than one layer at a time or when you need to tweak several portions of an image within a short period of time. It allows you to select more than one layer (on a single image) at a time. You access the Edit List by pressing Alt+Ctrl+L (Option+Command+L on a Mac), and it appears with the image you've currently selected. You can add, edit, and view other layers in the Edit List in the same way. The drop-down menus You see additional options displayed in the menus that enable you to further refine your image adjustments. Editing tools You also get a large assortment of tools to help you create and modify photos. These tools include the following: Eraser: You can scrub the image across the canvas with the Eraser tool, removing pixels. Knife tool: You can make the image look more textured by creating a ragged edge. Rectangle, Ellipse, and Line tools: They help you adjust the shape and size of your image. Brush tool: You can create or edit an image with a brush, from a small selection to a complete paint bucket. You can paint a selection or bring a pre-existing selection into the image. You can also use gradients to apply a color gradient to a selection or to any area of the image. The Masking/Layers panel The Layers panel enables you to separate portions of your image as individual images and then place them over one another to achieve a composited effect. The Layers panel is extremely useful to create masks and perform non-destructive editing. The Layers panel is accessed by pressing Alt+Shift+U (Option+Shift+U on a Mac). The Brush Panel The Brush Panel contains various brushes,

With an aim to reduce global climate change, a new groundbreaking technology from IBM is reinventing the way freight is transported in cities. IBM Smart Cities Smart Transport will enable transportation and cargo management for goods at the street level to improve customer journeys, increase delivery efficiency and to reduce emissions. The envisioned ultra-low emission vehicle will also allow for smaller, more compact landfills, reducing the need for massive repositories. There are currently six announced cities including New York, San Francisco, Mumbai and Amman, that will benefit from the technology. Image by Martin Fischer According to Sheng Zhenghao, director of Urban Mobility Research Center of IBM's Industry Labs, the company is not just looking to change the way citizens move around by improving efficiency of their journey, but also by looking at a "holistic picture" of the city. His team is building on work IBM did in the past that focused on optimizing the city's infrastructure for mobility. "We are taking the city to a higher level - by using sensors, data and technology to rethink and reinvent the city, so that we can create a better city with less emissions." Along with non-motorized transport, such as walking and public transportation, this also includes automated vehicles. This will reduce congestion and improve urban density. Smart Transport is also tackling the issue of big datasets and using machine learning in order to cut out any errors. Real-time data and mobility will also be on the top of the list with the aim of improving the services that people get. Image by Martin Fischer IBM also aims to leverage smart transport for better efficiency of freight as well. Especially in a city where mobility plays a big role, freight has to navigate through a maze of streets, businesses and neighborhoods. Delivering their cargo to the right place can be difficult, time consuming and costs money. In order to make this easier and more efficient, IBM is using innovations like artificial intelligence, Internet of Things, big data and blockchain to make big changes. Fingerprints for changing mobility IBM, as a leader in cognitive computing, will be taking its expertise in that field and making it accessible to smart cities. Transportation experts and the public will be able to develop the algorithms, machine learning models and process data, using IBM's platform to provide valuable insights. The company will be delivering the technology to cities and helping them create algorithms for collecting

### What's New in the Photoshop CC 2019?

Q: How to extend a table in SQL server In SQL server, if I create a table as CREATE TABLE [TEMP].[CUSTOMER\_DETAILS] ( [CUSTOMERID] INT, [ACCOUNTID] INT, [NAME] VARCHAR(100), [DOB] DATE, [ADDRESS] VARCHAR(200), [MIDDLE] VARCHAR(10), [CITY] VARCHAR(20), [STATE] VARCHAR(20), [ZIP] VARCHAR(20) ); Then if I want to create a new table and extend this existing table but don't want to change any of the values in the existing table, how do I do that? In Oracle, there's a way to do it as SELECT INTO but not in SQL server. A: SQL Server is not like Oracle when it comes to TABLE merge You can not change the values in the existing table as you want ALTER TABLE TEMP.Customer\_Details ADD COLUMN EmailAddress VARCHAR(100) NULL A: The best you can do is to create a new table with all the columns that you need then use the following to merge it into the old one: merge TEMP.Customer\_Details as T into CUSTOMER\_DETAILS using (select \* from TEMP.Customer\_Details) as D on T.ACCOUNTID = D.ACCOUNTID when not matched by target then insert (ACCOUNTID,NAME,DOB,ADDRESS,MIDDLE,CITY,STATE,ZIP) values (D.ACCOUNTID, D.NAME, D.DOB, D.ADDRESS, D.MIDDLE, D.CITY, D.STATE, D.ZIP); Note that if you don't have too many columns, there's even an easier way
