We're also introducing a new way to more easily control the behavior of one or more filters called "Live Gradients." The Live Gradients feature allows you to create gradient masks—adjustable boundary shapes that can be used to apply a color or grayscale gradient to specific areas of an image. And, while they work great for typical gradients, we've also added Live Blurs, a new feature designed specifically for blurring. Just select a shape for Live Blur, choose the size of the blur, and then the blur moves across the pixels of your image in a specific direction, resulting in a pretty cool effect. There is one other significant thing in this update that we don't have a name for yet, but which we're pretty sure we're going to have to call Photoshop 2023: it's for Windows too. This update is for all Windows versions of Photoshop, except for v20.4 and earlier. The only thing you need to know is that this is almost certainly better than what you already have—in previous Windows versions of Photoshop, support for Windows has been limited by the fact that different versions of Photoshop handle input differently, using a different keyboard layout; this is why the keyboard option gets turned off when you launch Photoshop on Windows. **ABOVE:** Hand-lettering and illustration from the VSL Vector collection, courtesy of the work of artists Chuck Sparlin and Dan Henk of VenuePhoto.com. **BELOW:** Laser-based etching from the Grid Design collection, by Chris and Delmont Rodd of The×Designs.com. Both are available in 1,000 different fonts for any project you can imagine.
