The overall look and feel of Photoshop and Lightroom wasn't something I was too excited about when I reviewed the release. But they have seemingly improved a bit. The interface has been revamped, and you don't get as overwhelmed with options as you do with earlier releases. You'll need to learn to navigate some new menus, but your toolbox and preferences window are generally back. Interestingly, it's pretty much in the same spot where it was in version 3 of Photoshop, except that you can now access the settings and options in tabs when navigating. The files that are open in your image editor will be displayed in a separate Library panel. As usual, you can make a shortcut for the panel and quickly open it. You can also access a number of panels by using "v" to access View menu. You have a History panel for previewing the images that are part of the current selection. You can also access it by pressing Option key + Z, or by choosing Window → History. Happily the History panel now includes Camera Raw data. Previously, you couldn't compare Camera Raw data with what was in the Raw converter or in the Develop module. I understand what Adobe is trying to do here. They're trying to make a more streamlined, streamlined workflow for customers who haven't been using Photoshop for much of their professional life. At the same time, however, there's one glaring, preventable security hole: Adobe has made the Development module completely open to anonymous, public access. Apple's new iPad app, Photoshop Sketch 2, is a new foray into the world of graphic arts, and I've never personally used a tablet before, nor has it become a staple in my design workflows. Yet, its blend of interactivity and the drawing tools available in the app encourage experimentation and exploration. However, the app's lack of permanence does make each time I save it, just as with sketching with an iPad, I lose my work. What makes the app special is the way that it lets users travel into new areas of design and may even allow you to move back and forth between touch screen and keyboard/mouse. This should appeal to designers and casual users alike.

Adobe is committed to delivering a roadmap of key priorities for the roadmap year 2021. Updates so

far will be incremental (in 2020) with on-going improvements in Creative Cloud app features, performance improvements, and other quality enhancements that will build excitement for more features. The next update for the Adobe Camera Raw (ACR) software is coming in a few weeks. This work is focused on the new API, which is now accessing the native platforms in a more conventional way. With this change, we are also removing older APIs that are based on reflection through the package installer. This includes the Camera Raw plug-in package, as well as support for older file formats, such as PSD, TIFF, TIFF with the new Exif profile, and more. In pursuit of a more stable native implementation of Adobe technology, we are also focusing on performance enhancements. The next release of Photoshop will include performance improvements in both the native app and the web application. In web apps, for example, users will see increased performance during editing operations, thanks to changes in JavaScript and the underlying technology. In the native app, this includes significantly improved performance helping users tackle more complex projects quickly. The update will be released in April 2020, and will include key new features such as the one-click Adjustment Panel tool made possible by new native APIs, significant performance enhancements, and other quality improvements. The April 2020 release also involves the removal of the legacy CC 2020 update. As we continue to iterate on the new API and platform approach outlined here, we will return to opportunities to roll this up other of the feature frameworks ultimately released. However, we will not be adding any features here as part of the 2020 release.
