We will start by talking about the new features in Lightroom 5, and we will then move to what commonly offers vulnerabilities. If you are using an older version of Lightroom instead, don't be too surprised at the fact that you will need to get an upgrade. Lightroom does not have a profile control. As I mentioned, you can select the color profile by going to Edit > Preset Manager, and then prepopulate the 'Profile' box with the color profile number (such as, CMYK). The color profile created by CS6 usually produces superior results compared to Photoshop. That said, you can still use these options to save them for later use. When working on photos in Lightroom, there are many different (and useful) adjustments that are available in Lightroom. These include: Basic (Settings button), Adjustment Points (known as Smart Adjustments), Enhance, Exposure, Levels, Clarity, Tone, Curves, Temperature, and others. In addition, the adjustments down the right side panel are also good images. Next to them, there is the HSL/HSL Settings (known as HSL/HSL/HSL Settings, depending on the version) section. This is where you use the controls of Hue, Saturation, and Lightness to tweak your image. For those who like to create image adjustments with non-destructive editing, this is a must have feature. However, it is nice to have it while using Photoshop for the final edit, rather than having to go back to Lightroom. There are new enhancements to the Adjustments panel such as the allow previously saved filters to be applied in a stack. In the adjustment panel, you can also quickly compare the original image and edit, for example, exposure, saturation, color, and brightness. The Adjustment Points feature allows you to easily and precisely place adjustment points while working with a photo. The feature allows you to place adjustments in a symbolic way. The same image can be edited a thousand different ways by using different adjustment points. Once you have places adjustment points to make a given adjustment, a button called Delete All shift will help you actually delete all the points and do the adjustment all over again. We will talk about the Improvements panel later.
